An astronomy book lay propped open on the table in front of him. Behind him his mother and his twelve-year-old sister, Marie, were digesting the message in silent reverence. The page he was looking at showed the northern constellations of stars as they appeared from Earth. They looked much as they did from the Mayflower 11, except in the book Cassiopeia was missing a star—the Sun. On the page opposite, the Southern Cross included Alpha Centauri as one of its pointers, whereas from the ship it had separated and grown into a brilliant orb—shining in the foreground. And the view from Earth didn't show Proxima Centauri at all—a feeble red dwarf of less than a ten-thousandth the Sun's luminosity and invisible without a telescope, but now quite close to and

In the Political Science course at school, the Mayflower II's primary mission had been described as one of "preemptive liberation," which meant that because the Asiatics and the Europeans were the way they were, they would seize Chiron and convert it to their own corrupt ways if given the chance, and the Mayflower I1 therefore had two years to teach the Chironians how to protect themselves. "Jeeves told me about it. It's a completely different species'--a kind of fern. Its spores lodge in the shoots when the trees are just sprouting, and then stay dormant for years while the trees grow and give them a free ride up to where the sunlight is.
